

Sustainability: at the core of our business

We are focused on fulfilling our share of the responsibility to keep the global temperature rise below 1.5°C and our parent company HeidelbergCement, has committed to the UN's Race to Zero campaign and the private sector Science Based Targets Initiative (SBTi).

Sustainable business practices are an integral to our strategy. We focus on reducing the impact of our operations on the environment and use our core competencies to contribute to the UK's construction needs.

Did you know?

- Sustainability provides many new opportunities as it drives us to innovate and create new solutions.
- We have outlined our sustainability commitments for 2030 centred around: fairness, inclusion and respect, business and product Innovation, health, safety and wellbeing, environmental responsibility, resource use and the circular economy, and being a good neighbour, which includes social value.
- Our progress towards these goals is published in our annual sustainability report.
- Every positive action, no matter how small, is important. Everyone's contributions can make a difference towards a sustainable future.

Environmental sustainability for our UK business means:

- Being a good neighbour by building strong relationships with the local communities we operate in and reducing our environmental impact.
- Delivering social value to all our stakeholders.
- Tackling climate change through reducing the impact of our operations, from carbon capture, utilisation and storage (CCS) initiatives at our cement works to the use of alternative fuels across our business.
- Enhancing nature conservation and species protection through biodiversity management plans.
- Conserving resources by maximising the use of recycled materials in our cement, asphalt and concrete operations.
- Investing in and driving technological innovation in sustainability projects.

In the increasingly important area of environmental sustainability, we are committed to enabling sustainable construction in the UK by reducing the impact of all of our operations on the environment, reducing both our consumption of natural resources and our carbon footprint.
