Hanson Onyx

Colourcrete®

Hanson's Colourcrete range of coloured concretes can add a whole new dimension to your project. It can be used wherever conventional concrete is specified and can be colour-matched to blend with the surrounding area or help your project stand out from the crowd.

Before you begin

Important information for architects, home owners and concrete contractors: as all high-quality designer building products do, Colourcrete requires thorough planning and the utilisation of reputable contractors in order to achieve a high-quality finish.

Colours represented in this brochure are indicative. We suggest viewing products first hand before ordering.

Plan

1. Application area and the location – how does the concrete fit within your overall design?
2. Access to site – this will determine how the concrete is to be placed.
3. Consider the final product – who will place the product? Who will finish the product? When do you want your project completed by?

Select

1. Visit our Colourcrete showroom in London or speak to your Colourcrete representative and discuss your ideas.
2. Select your product - understand your material choices. Remember natural products can vary.
3. Different placement methods can impact the final product.

Prepare

1. Give sufficient notice when ordering – to ensure availability of your chosen Colourcrete product, a minimum notice period applies.
2. Site preparation is imperative; ensure your site is ready.
3. Consult your local council to determine environmental regulations for the disposal of waste.

Place

1. Safety first – cement based products such as concrete have corrosive properties that may be harmful to the skin or eyes. Wear the appropriate PPE at all times.
2. Check product – once the delivery arrives onsite, check that it is the correct product.
3. Don't add water – Colourcrete has been specially designed to achieve a unique look. Any addition of water to the concrete once it has arrived on site may result in an unsatisfactory finish and will reduce the strength of your concrete.

4. Use reputable contractors – the placement and finish of the product, curing and protection is paramount to the end result. Hanson recommends that only reputable contractors be used to place and finish Colourcrete decorative range.

Care

1. Ensure bleed water is removed from surface after placement to avoid deposits called laitance causing temporary discolouration.
2. Protect – seal the finished surface, don't use harmful chemicals. Maintain your concrete for a long lasting look.

This chart is for guidance only. Concrete is a blend of aggregate and other natural materials which may change the appearance and availability from region to region. The colours shown may not exactly represent the final colour. Shade variations of cement and aggregate, plus variations in the volume of water, the addition of admixtures and other additives may have an effect on the design mix and final colour. We recommend that a test slab be poured and approved prior to the start of the project.

Hanson reserves the right to alter, remove or replace these products without notice.
