

Project case study

# Low carbon concrete used for Buchanan Wharf project

## Product

Low carbon concrete

## Contractor

Northern Steel Decking

## Overview

Northern Steel Decking used Heidelberg Materials' low carbon concrete for the Buchanan Wharf project in Glasgow, where the Scottish Government sought a lower carbon construction option. When their client requested an alternative solution, Northern Steel Decking approached Heidelberg Materials, who recommended products from their low carbon concrete range.

## Project description

One of our customers Northern Steel Decking used Heidelberg Materials' low carbon concrete as part of the Buchanan Wharf project in Glasgow in which the Scottish government wanted to explore opportunities for a low carbon solution.

Northern steel decking works in the construction industry as a manufacturer of metal decking and the supply and installation of metal flooring on to multi floor construction sites, steel framed buildings.

Jack Fulton, managing director of Northern Steel Decking says, "We were asked by our client in Glasgow about a job in Buchanan Wharf, and if we could look into a low carbon option for the concrete so, we approached Heidelberg Materials to see what we could offer our client and they told us about their low carbon concrete range."
