

Understand how carbon capture is achieved in the manufacture of cement

15th April 2026, 11am to 1pm

[Click here to book your place](#)

Carbon Capture is revolutionising the manufacture of cement, and helping the construction industry decarbonise. Learn about the processes being used and the impact on the global warming potential of cement and concrete.

Presented by technical experts, you'll learn how the carbon is captured and stored, exploring differences between our plants in Brevik, Norway, and Padeswood in North Wales. We will also discuss other technologies being trialled.
