

Driving low carbon asphalt through innovation

In-person CPD 16 July, 10:30 - 14:00, lunch provided

The UK government's Net Zero 2050 target places a clear mandate on infrastructure leaders to accelerate innovation and deliver sustainable solutions. With nearly 250,000 miles of UK roads, over 95% surfaced in asphalt, decarbonizing asphalt production sits at the very heart of this challenge.

On **July 16**, join us at the evoHub for our Driving Low Carbon Asphalt Through Innovation seminar. Explore how cutting-edge technologies and innovative techniques are driving significant carbon reductions in road building.

Programme and presenters

In partnership with Shell Bitumen.

- Sustainable asphalt solutions with **Adrian Hadley, Head of Technical, Asphalt & Aggregates**
- Bitumen Innovations for decarbonisation with **Callam Brough, Bitumen Application Advisor**
- CBGM and foamed asphalt in practice with **Joel O'Connor, Technical Sales Manager**
- Hydrogen as a future fuel with **Rachel Morse, Net Zero Advisor**

How to find us

We are a five-minute walk from either Farringdon or Barbican underground stations.

Our address is

[Heidelberg Materials evoHub, Techspace](#)
[140 Goswell Road, London](#)
[EC1V 7AD](#)
