

How close can concrete get to net zero?

Join evoHub Online on **24 November**, streamed live from evoHub Clerkenwell, to explore how innovative near-zero carbon cement and concrete solutions are supporting the decarbonisation of construction.

Whether you want the complete journey from cement to concrete or want to focus on the topic most relevant to you, choose your preferred session and register today.

Session 1:
Decarbonising construction with carbon captured cement
14.30 to 15.30

Discover how carbon captured cement is driving down embodied carbon and supporting the transition to lower carbon construction. This session explores how innovative capture technologies are reshaping cement production and laying the foundations for near-zero materials.

Click here to register

Session 2:
Introduction to lower carbon concrete
16.00 to 17.00

Building on the concepts introduced in our carbon captured cement CPD, this session explores lower carbon concrete; how material innovations and supplementary cementitious materials are integrated, specified and used to deliver sustainable performance in real-world construction.
